Senior Software Developer

Location(s): Ann Arbor MI, Folsom CA, Minneapolis MI

Summary/Objective

This exciting, challenging, and rewarding role involves architecting, maintaining, and growing our internal applications. This includes highly visible products that are growing every day as users are becoming more familiar with and comfortable using our internal suite of applications. By combining the latest architectures, tools and technologies we enable and empower you to learn about, discover, support and expand on the application as you grow within the team. We put a lot of trust in our developers and enable them to work autonomously to stay in the forefront of emerging technologies.

Essential Functions

- Designs, develops and tests applications following specifications using the appropriate tools.
- Maintains and modifies existing applications without supervision as well as under direction from senior staff members.
- Assists in the collection and documentation of user's requirements, development of user stories, and estimates
- Packages and supports deployment of releases
- Performs maintenance programming for existing version.
- Performs custom programming at customer request.
- Assumes responsibility for ongoing performance, reliability, and data integrity for product.
- Maintain/update all technical documentation such as ADD and SDD.
- Designing, developing, refining, and tuning integrations between applications
- Analyzing and resolving technical and application problems
- Adhering to high-quality development principles while delivering solutions on-time and on-budget
- Leading peer-reviews of solution designs and related code
- Assisting with build vs. buy decisions for application components and frameworks
- Suggesting process and technology improvements
- Providing third-level support to business users
- Conducting feature demonstrations to product owner, end users, and other stakeholders
- Communicating issues with team lead and other stakeholders in a timely manner to limit project timeline and cost impacts
- Owning application component implementation and assuring quality delivery

Education and Experience

- Bachelor's degree in computer science, related field OR equivalent experience
- 4+ years of development experience in PHP and LAMP technology stack.
- 4+ years of relational database experience including schema design and SQL.
